

# 19th INTERNATIONAL CONFERENCE ON EXPERIMENTAL MECHANICS

Kraków, Poland, July 5-9, 2020

## CALL for Papers!

### Special Session

on

## *Fracture, Damage Mechanics and Durability of Structural Concrete*

The aim of the Session is to bring together researchers working in the field of experimental mechanics applied to fracture, damage mechanics and durability of concrete and to benefit from discussions with experimentalists specialized in other materials. Up to present, a wide variety of cutting-edge experimental methods like CT (Computerized Tomography) scanner, DIC (Digital Image Correlation), NDT (Non-Destructive Testing) and some others have been extensively used to study the damage of concrete and fiber-reinforced concrete. Papers on the application of these or other methods and on the numerical techniques associated to them are welcome.

**Abstract Deadline: November 30, 2019**

**Abstract Submission: <https://icem19.org>**
